A A membrane is a depth, not a switch

B Two regions, two scales

C One structure, read residue by residue

D What the software returns, in order

1. **Place the bilayer**
   one free energy over the normal, the mid-plane and the thickness
2. **Annotate every residue**
   a topology label, a depth, a zone and a confidence
3. **Resolve the hard cases**
   hairpins, broken helices and interfacial helices
4. **Say what it cannot resolve**
   a transfer free energy and an uncertainty flag
